

Description		Levels/ Effect
1	<b>Self-Distancing:</b> reduction of mean number of contacts per day per individual	20% , 50%
2	<b>Self-Isolation</b> of symptomatic (!) people in individual tents	Number of available tents: 10, 20, 50, 100, 250, 500, 1000, 2000
2b	<b>Number of carers (☾):</b> healthy people that will take care of self-isolated people	1 per tent
2c	<b>Self-Isolation delay:</b> time from symptom onset to self-isolation	12h, 24h, 48h
3	<b>Safety zone:</b> designated area for vulnerable population	Elderly only Elderly + Comorbid Adults Elderly + Comorbid Adults + Children (up to 20%, 25%, 30% population)
3b	<b>Number of contacts</b> people in the safety zone can have with people from the exposed zone (contacts always happen in the buffering zone)	2 or 10 contacts (per week per individual residing in the safety zone)
3c	<b>Health checks</b>	Exclude symptomatic (!) people from meeting with people from the safety zone
3d	<b>Lockdown of safety zone</b> if one case is detected in the exposed zone	Reduces value of 3b at 50% or 90%
4	<b>Evacuation of severely symptomatic</b>	Evacuated individuals cannot infect other people from the camp, but they do not receive healthcare
	<b>Buffering zones:</b> open space, 2m distance, use of face cover	Reduces probability of infection by 80%
